

IN THE ABSTRACT

AbstractABSTRACT OF THE DISCLOSURE

The invention relates to recording pictures, produced by a mobile station, in the mobile station and to naming the recordable picture files. In order to name the picture files, among the data available in the mobile station, there is searched a given feature associated to the picture, and the searched feature is added in the name suggestion list containing picture file name suggestions in order to create said name suggestion list. The created name suggestion list is displayed in the user interface, where the picture file name can be edited.
